The Vocal Tract. Places of articulation: 1. bilabial; 2. labiodental; 3. interdental; 4. alveolar; 5. (alveo)palatal; 6. velar; 7. uvular; 8. glottal.

Some Phonetic Symbols for American English Consonants

	Bilabial	Labiodental	Interdental	Alveolar	Palatal	Velar	Glottal
Stop (oral)							
voiceless	p			t		k	ʔ
voiced	b			d		g	
Nasal (voiced)	m			n		ŋ	
Fricative							
voiceless		f	θ	s	ʃ		h
voiced		v	ð	z	ʒ		
Affricate							
voiceless					tʃ		
voiced					dʒ		
Glide							
voiceless	ɱ					ɯ	
voiced	w				j	w	
Liquid (voiced)							
(central)				r			
(lateral)				l			

In memory of Robert David Rodman and Joseph Hyams

About the Authors

VICTORIA FROMKIN received her bachelor's degree in economics from the University of California, Berkeley, in 1944 and her M.A. and Ph.D. in linguistics from the University of California, Los Angeles, in 1963 and 1965, respectively. She was a member of the faculty of the UCLA Department of Linguistics from 1966 until her death in 2000, and served as its chair from 1972 to 1976. From 1979 to 1989 she served as the UCLA Graduate Dean and Vice Chancellor of Graduate Programs. She was a visiting professor at the Universities of Stockholm, Cambridge, and Oxford. Vicki served as president of the Linguistics Society of America in 1985, president of the Association of Graduate Schools in 1988, and chair of the Board of Governors of the Academy of Aphasia. She received the UCLA Distinguished Teaching Award and the Professional Achievement Award, and served as the U.S. Delegate and a member of the Executive Committee of the International Permanent Committee of Linguistics (CIPL). She was an elected Fellow of the American Academy of Arts and Sciences, the American Association for the Advancement of Science, the New York Academy of Science, the American Psychological Society, and the Acoustical Society of America, and in 1996 was elected to membership in the National Academy of Sciences. She published more than one hundred books, monographs, and papers on topics concerned with phonetics, phonology, tone languages, African languages, speech errors, processing models, aphasia, and the brain/mind/language interface—all research areas in which she worked. Vicki Fromkin passed away on January 19, 2000, at the age of 76.

ROBERT RODMAN received his bachelor's degree in mathematics from the University of California, Los Angeles, in 1961, a master's degree in mathematics in 1965, a master's degree in linguistics in 1971, and his Ph.D. in linguistics in 1973. He was on the faculties of the University of California at Santa Cruz, the University of North Carolina at Chapel Hill, Kyoto Industrial College in Japan, and North Carolina State University. His research areas included forensic linguistics and computer speech processing. In 2009, he was elected into the American Academy of Social Sciences as an Associate Fellow for his achievements in computational forensic linguistics. Robert Rodman passed away on January 15, 2017, at the age of 76.

NINA HYAMS received her bachelor's degree in journalism from Boston University in 1973 and her M.A. and Ph.D. degrees in linguistics from the Graduate Center of the City University of New York in 1981 and 1983, respectively. She joined the faculty of the University of California, Los Angeles, in 1983, where she is currently a professor of linguistics. Her main areas of research are childhood language development and syntax. She is author of the book *Language Acquisition and the Theory of Parameters* (D. Reidel Publishers, 1986), a milestone in language acquisition research. She has also published numerous articles on the development of syntax, morphology, and semantics in children. She has been a visiting scholar at the University of Utrecht and the University of Leiden in the Netherlands and has given lectures throughout Europe and Japan. Nina lives in Los Angeles with her pal Spot, a rescued border collie mutt, and his olde English bulldogge companion, the ever soulful Nellie.

and their like are a very small part of any language, and *gl* may have nothing to do with “sight” in another language, or even in other words in English, such as *gladiator*, *glucose*, *glory*, *glutton*, and *globe*.

To know a language, we must know words of that language. But no speaker knows all the entries in an unabridged dictionary—and even if someone did, he would still not know that language. Imagine trying to learn a foreign language from an online dictionary. However, many words you learned, you would not be able to form nor understand very many phrases. And even if you could manage to get your message across using a few words from a traveler’s dictionary, such as “car—gas—where?” the best you could hope for is to be pointed in the direction of a gas station. If you were answered with a sentence, it is doubtful that you would understand what was said or be able to look it up, because you would not know where one word ended and another began. Chapter 3 will discuss how words are put together to form phrases and sentences, and Chapter 4 will explore word and sentence meanings.

The Creativity of Linguistic Knowledge

All humans are artists, all of us . . . Our greatest masterpiece of art is the use of a language to create an entire virtual reality within our mind.

DON MIGUEL RUIZ, 2012

ALBERT: So are you saying that you were the best friend of the woman who was married to the man who represented your husband in divorce?

ANDRÈ: In the history of speech, that sentence has never been uttered before.

NEIL SIMON, *The Dinner Party*, 2000

Knowledge of a language enables you to combine sounds to form words, words to form phrases, and phrases to form sentences. No matter how smart your smartphone is, it cannot contain all the sentences of a language because the number is infinite. Knowing a language means being able to produce and understand new sentences never spoken before. This is the **creative aspect** of language. Not every speaker can create great literature, but everybody who knows a language can create and understand novel sentences.

That language is creative and sentences potentially infinite in length and number is shown by the fact that any sentence can be made indefinitely longer. In English, you can say:

This is the house.

or

This is the house that Jack built.

or

This is the malt that lay in the house that Jack built.
